

HWH® Hand/Electric Pump with Remote Operating Panel and Manual Back-up

Available for Fifth Wheel, Horse & Specialty Trailers

Includes the following features...

- 12 volt DC electric pump provides hydraulic pressure for jacks and rooms.
- The solenoids allow the operator to extend or retract jacks and rooms with electrically operated switches.
- Switches can be remote mounted for easy access.
- The integrated manual hand pump is the perfect back-up in the event of a dead battery.

Manual hand pump extends and retracts HWH® jacks or rooms with minimal effort. No electrical power is required.

The power unit is equipped with a manual two-stage hand pump which automatically shifts from high-volume with low-pressure to low-volume with high-pressure. This provides a rapid extend of the landing gear, but also gives you the power to lift a sizeable load.

The base of the hand pump swivels 180 degrees to allow more flexibility in mounting the controls.
